### important

we have taken every care in writing and producing this how to guide but can not accept any responsibility for it's appropriateness in individual circumstances and if you have any doubts at all please do not undertake your project without first consulting a qualified trades person.

only stair make-over adhesive and sealant should be used and applied as directed

there are potential safety issues if stair make-over is fitted incorrectly and you should be sure of your ability to complete the project safely before undertaking any work.

**if in any doubt whatsoever consult a qualified trades person before undertaking any work**

### you will need

tape measure

masking tape

marker pen pencil & square

saws fine tooth handsaw or jigsaw with down cut blade and a hacksaw

cartridge applicator gun

water spray bottle

always wear the appropriate safety clothing and take care when working with any tools

## how to install stair make-over on winding and spiral stairs includes deep treads

on a winding stair or for individual kite treads we strongly recommend using the stair make-over measuring tools.

to mark out a winding tread start by placing the nose tool on top of the existing tread (which mimics the finished depth of the stair make-over tread) and use an arm from the measuring tool to mark this against the stringer on both sides.

now take the centrepiece of the measuring tool and position over the nose tool towards the middle of the front of the tread and place measuring arms and large washer over the centre threaded stud to rest against the pencil marks at either side at the front, the back corners of the tread and any intermediate points (like a newel post).

when you have the rough positions indicated by the arms of the measuring tool add the nut and tighten loosely before double checking the position of the arms and tightening securely to avoid the arms moving, the tool can also be used to measure straight treads if needed

transfer the tool to the top of the stair make-over tread to be cut and mark the position of the tips of each arm with a soft pencil. Simply join these points up with a straight line and you have the accurately transferred the dimensions of the tread for cutting.

### handy hints

our on line planner gives a quick and easy reference guide to what the various elements of a staircase are called and has a page dedicated to winders

It gives details of the two main types of winder and in order to establish what you need for your project a handy measuring guide and simple chart on which to record the various measurements is provided

if required the planner can be e mailed to us so we can work out what materials you will need to complete your project and how much it will cost and we send you a free no obligation materials list and quotation within 1 working day

always wear the appropriate safety clothing and take care when working with any tools

STAIR  
MAKE-OVER

*That's easy*

## how to install stair make-over on winding and spiral stairs includes deep treads

stair make-over treads are designed to be deep enough to cover the majority of applications, however on some stairs with small landings or very wide winding stairs a standard tread may not be deep enough.

don't worry, it's very easy to join an additional piece to extend a tread. simply glue the MDF fillet supplied into the rebate on the back of the tread you need to extend.

then take either, an offcut from a tread you have already cut to size, or alternatively cut the bullnose from a new tread apply some glue to the rebate and push the two treads together.

wipe off any excess glue immediately, and apply several strips of masking tape across the joint to prevent movement during drying.

once dry simply measure, cut and install just like any other tread.

for additional information on installing stair make-over on half landings that are deeper than two treads joined together please download our how to guide covering half landings and transitioning stair make-over onto landings

visit [www.stairmakeoversolutions.co.uk](http://www.stairmakeoversolutions.co.uk) and click on the how to install tab if you prefer to speak to us in person to discuss any aspect of your project, our products or services please call us on +44 (0) 1507 474408

### handy hints

#### 1400 treads

need extra depth for a tread when using a 1000 mm stair make-over tread?

rather than joining two pieces together with the MDF fillet and glue you might be able to use a 1400 tread instead as these are 100mm deeper as standard.

#### 1000 treads

280mm deep

#### 1400 treads

380mm deep

always wear the appropriate safety clothing and take care when working with any tools
